“I am simply amazed by this service. I participated in a simple 10-minute ultrasound to find out if I had risk of stroke. In that 10 minute I not only found out I had no risk of stroke, **BUT I was made aware of what turned out to be thyroid cancer.** This service explains what they are seeing with your ultrasound as they are performing the test. So, as the technician was scanning me, he explained that I **had a small thyroid cyst that was very low risk**, but that I should consult my doctor and let him decide next steps. I am so lucky I did! My doctor stated that **without this ultrasound there would have been no way to detect such a small cyst, and finding cancerous cysts early is the key.** My treatment was easy, and there was no need for any chemo or radiation. **Please give an hour of your time even if you do not think you have risk of stroke, it very well may save your life.**
